This course is one of a two part-series which, along with ECON 8774, makes up the development economics field at the University of Colorado. In this class we will focus primarily on microeconomic issues from a largely empirical perspective. Some of the topics covered include the distribution of resources within households, human capital development such as health and education, migration, poverty traps, and gender issues relevant for developing countries. The objective of the course is to provide an overview of the microeconomics of development and to prepare students for doing original research in the field.
